

Capgemini Exceller 2027

Placement AI Co-Pilot — RAG Reference Document

IMPORTANT SOURCE STATUS: This is an unofficial RAG reference compilation. Capgemini's public site confirms the Exceller program, but the detailed 2027 assessment pattern here is compiled from independent public sources and candidate-reported experiences. It is not an official Capgemini syllabus or assessment PDF.

1. Official Capgemini Exceller Program

Capgemini describes Exceller as its flagship program for technical students and says it engages engineering institutes and graduate colleges in India to hire emerging technical talent. The official public page does not provide a detailed 2027 assessment syllabus.

2. Reported 2027 Assessment Structure

Stage	Assessment	Reported details
1	English Communication	Listening, Speaking, Reading and Writing; AI-proctored; ~30 min
2	Technical Module	AI Literacy + Technical Assessment; reported as 2 sections of 20 MCQs; ~40–50 min
3	Debugging Assessment	One coding/debugging task; reported ~20–25 min; C/C++/Java reported by sources
4	AI-Assisted Coding	Coding task using an AI assistant; reported ~45 min
5	Cognitive Assessment	Motion Challenge, Grid Challenge, Logical Reasoning and Behavioural module; ~20–30 min
6	Technical Interview	Resume/projects, CS fundamentals and DSA; reported ~20–35 min
7	HR Interview	Behavioural/cultural discussion; reported ~10–20 min

3. AI Literacy — Reported Topics

- **AI Foundations & Generative AI:** generative AI, foundation models, LLM capabilities and limitations.
- **Prompt Engineering:** prompt structure, context setting and AI-assisted problem solving.
- **Advanced AI Systems:** RAG fundamentals, agentic AI, AI agents and multi-step workflows.
- **Responsible AI:** output validation, bias awareness and responsible AI practices.

4. Technical Assessment — Reported Topics

- **Programming Logic:** variables, data types, input/output, debugging and pseudocode.
- **DS & Algorithms:** arrays, strings, hashing, searching, sorting and time/space complexity.
- **Software Engineering:** OOP, DBMS, SQL, REST APIs, HTTP methods and Git fundamentals.
- **Modern Engineering:** client-server concepts, cloud, API keys vs tokens, networking, cybersecurity, Agile, DevOps and Docker.

5. Debugging — Reported Focus

- Review the problem statement and existing code.
- Identify syntax, logic, runtime or boundary-related errors.
- Make minimal corrections.

- Validate the corrected solution and consider edge cases.
- Public reports mention trees/graphs, 2D DP and advanced data structures, but exact college-specific coverage may differ.

6. AI-Assisted Coding — Reported Focus

- Understand the coding problem before interacting with the AI assistant.
- Give structured and relevant prompts.
- Use the AI assistant to support implementation rather than relying on random or vague prompts.
- Review and validate the generated result.

7. Eligibility — Publicly Reported Information

Independent 2027 preparation sources report criteria such as the 2026–2027 passout batch, 60% or above in 10th, 12th and graduation, and no active backlogs at interview time. These criteria should be treated as reported information, not as a substitute for the actual Capgemini campus communication received by a college.

8. Important 2027 Pattern Caveat

Candidate reports from September 2026 show that some colleges were given a more specific structure involving Communication → Problem Solving/Debugging → AI-assisted Debugging → AI-assisted Feature Development → Prompt Engineering → Cognitive Assessment. Other public compilations describe a Technical/AI Literacy module and AI-assisted coding. Therefore, the exact assessment structure may vary by hiring drive or campus. For an actual test, the placement cell's Capgemini communication should take precedence.

9. RAG Usage Note

Recommended folder: documents/capgemini/Capgemini_Exceller_2027_RAG_Reference_UNOFFICIAL.pdf

Suggested test questions: What are the reported 2027 assessment stages? What topics are reported under AI Literacy? What is the reported debugging format? What is AI-assisted coding according to this reference?
